

PERFORATION RECONDITIONER SET LIGHT

**Do you have motion picture
shrunk films with missing
perforations?**

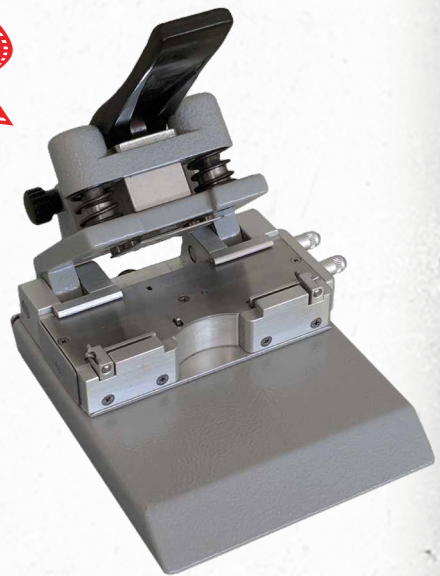

**You need to replicate the
missing perforations but you
want to keep correct distance
between the perforations?**

HERE IS THE LIGHT SOLUTION!

1

2

With this "LIGHT" approach and set of tools you will:

1 - Apply some regular and neutral splicing tape to reproduce the original film border of the damaged side, giving back strength to the film support itself.

2 - Replicate the perforations on the applied tape, punching it through the provided tool that will align the puncher having the opposite correct perforation as reference.

3

With this set of tools you will be quickly able to:

- 1 - Apply some regular and neutral splicing tape to reproduce the original film border giving back strength to the film support itself.
- 2 - Measure the new aged and then reduced perforation distance.
- 3 - Replicate the perforations on the applied tape, cloning the new shrunk distance so to keep the same pitch on the whole film length.
